•D Data & Analytics Framework: how public sector can profit from its immense asset, data

•D DAF

Data & Analytics Framework (DAF)

- Vision & Strategy
- Ok, but what is DAF?
- Our Strategy
- Some Architectural Highlights
- Use Cases

Q&A

Information is a fundamental asset to interpret social and economic phenomena, take informed decision, improve services to citizens, compete in the international arena. New Technologies allow to extract

New Technologies allow to extract knowledge from the immense amount of data owned by the State.

Problems to Solve

Lack of a central body that supervise and coordinate the creation, management and usage of information.

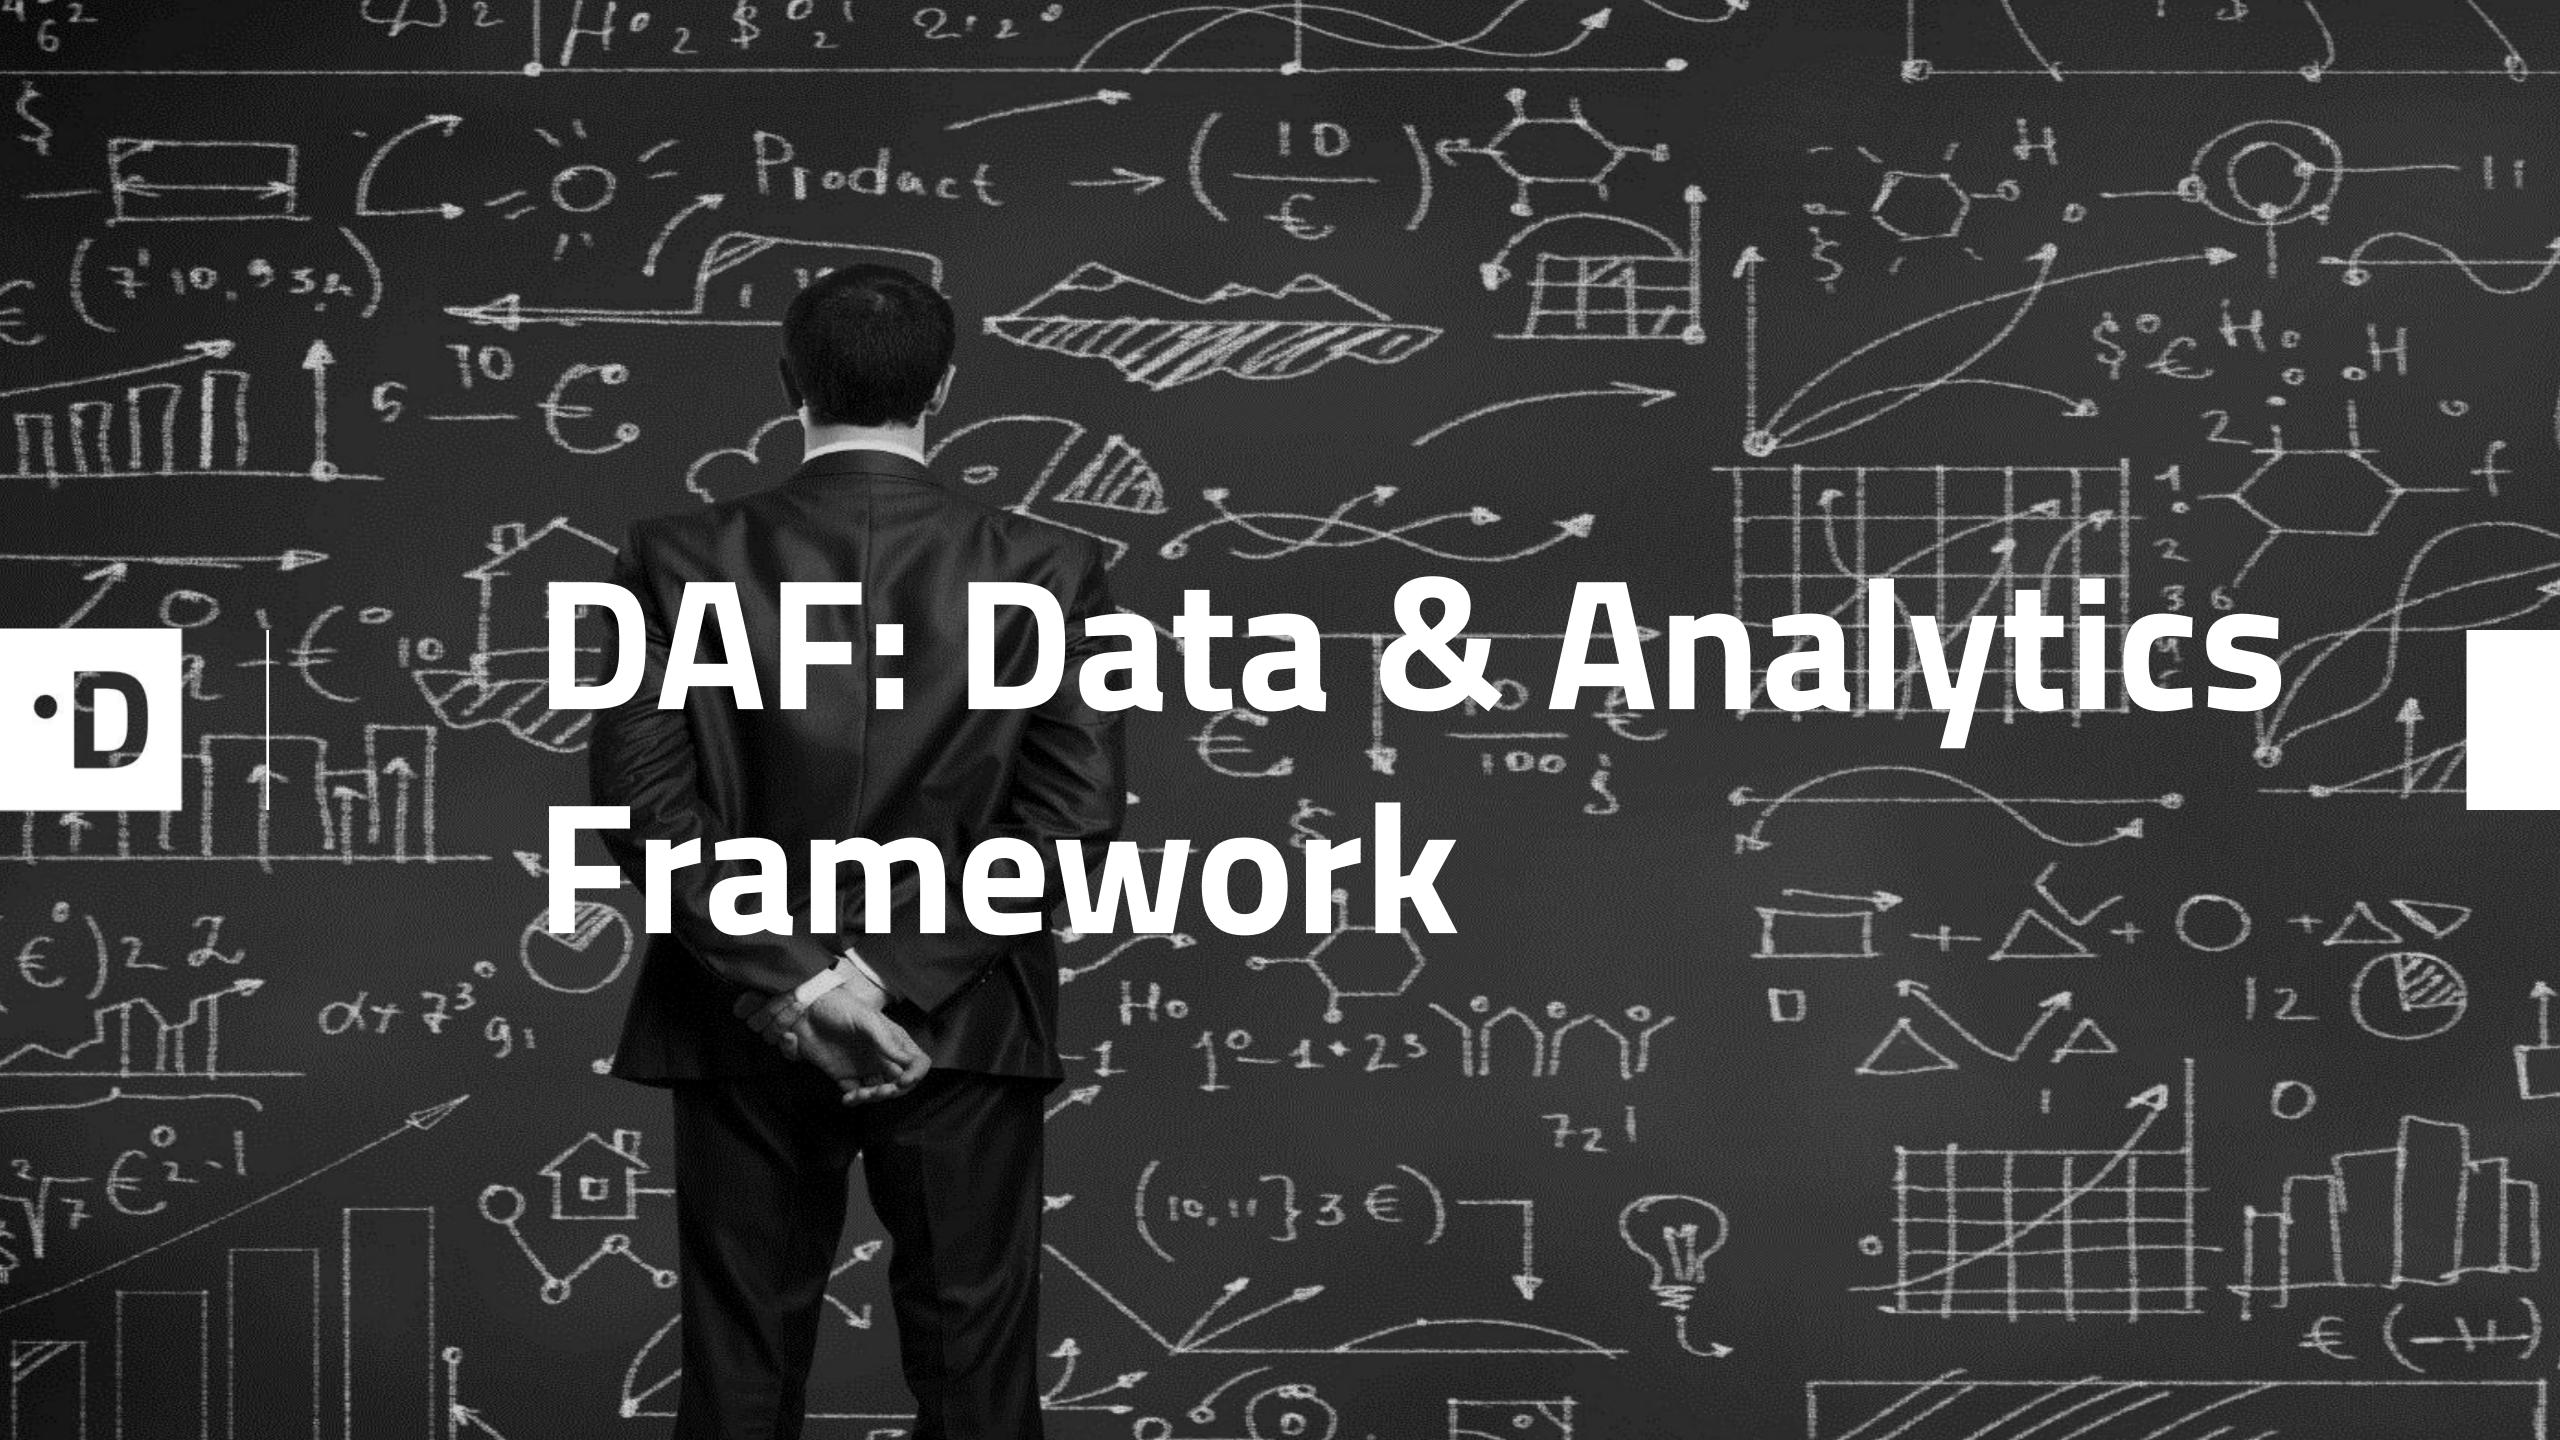

- Data exists, but are not properly used • Silos and lack of standards (low
 - integrability)
- Lack of tech and analytic competencies • Lack of sharing and cooperative culture • High tendency of reinventing the wheel, especially in the analytics / DWH space Too many open data portal, low attention to quality

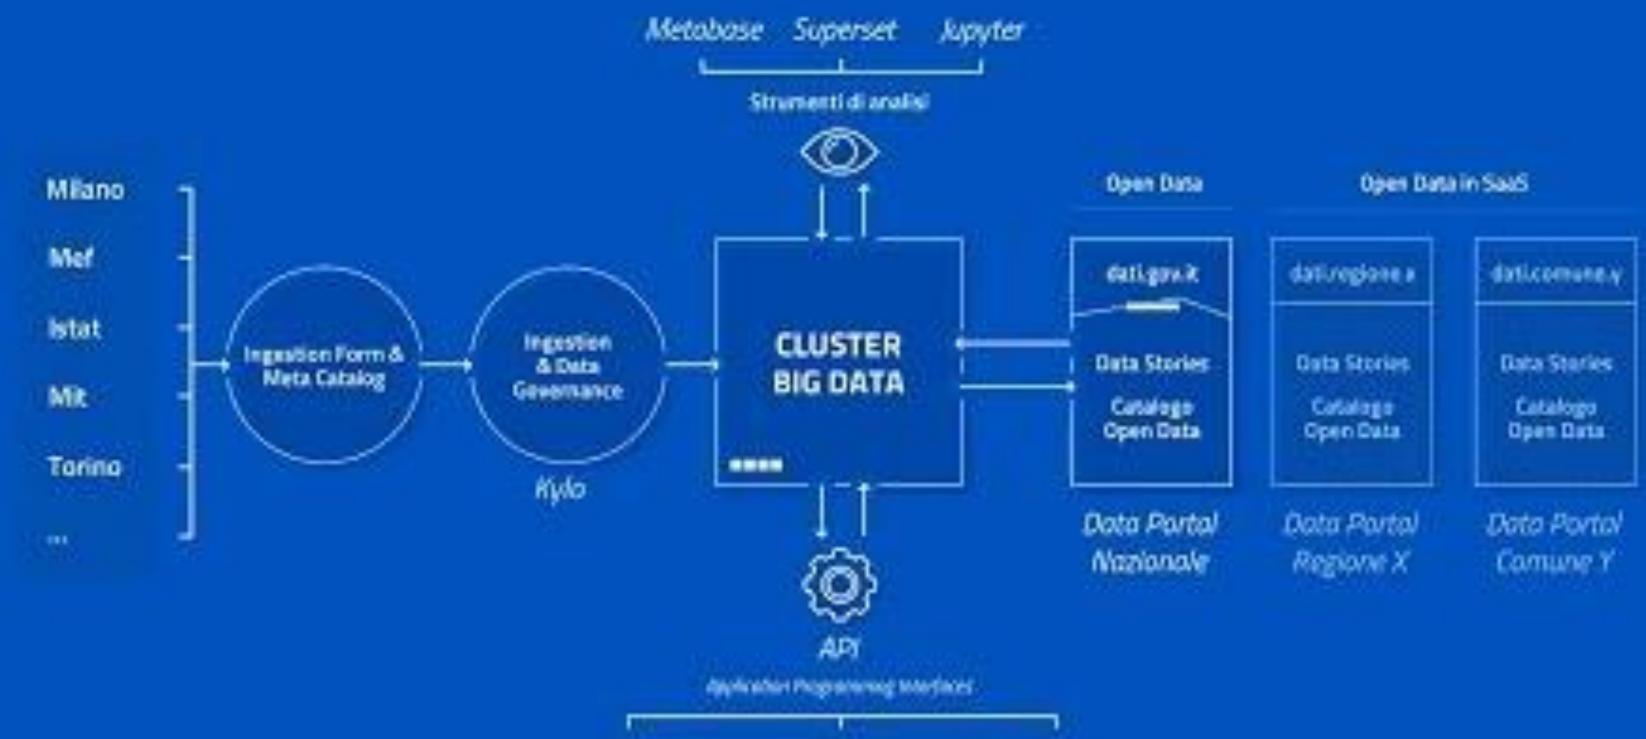

·D Strategy

Extracting value from data needs a solid technological platform, a team of experts, and a proper governance to govern the generation, integration, standardization and use of data

deteropolizations

Give us data and a platform...

Data & Analytics Framework (DAF) is a combination of:

• A **Big Data Platform** to centralize and store (data lake), manipulate and standardize (data engine), re-distribute (API & Data Applications) data and insights. **Data Mgmt & Analytics as a Service**

 A Data Team (data scientists + data engineers) which uses and evolve the Big Data Platform to analyze data, create ML models and build data applications and data viz.

• Laws and regulations to make this activity possible

... and we shall move the PA

Interoperability (aka Get out of the Silos!) Public data is... public and all PP.AA. should have access to it. Data sharing & exchange problem optimally solved.

Knowledge for better policy making & processes management Better policy implementation and ex-post monitoring. Optimized services to citizens. Less expensive and more efficient data management processes

Data Products (aka deliver value & insights) Machine Learning in interconnected software applications

Democratizing Data & Crowdsourcing (aka API, Data Viz & Open Data) Citizens (esp. civic hackers) contribute to the surfacing of knowledge

End Goal: Chief Data Office for the PA

Mission: Data driven decision making in efficient ways Support PA at all levels to implement informed policies, both ex ante (policy formulation) and *ex post* (policy monitoring and fine tuning).

Centralize common & non-domain specific tasks Provide general purpose data platform once and for all, efficiency in standard data processes, let PA focus on domain specific tasks / analysis

Economy of scope towards a center of excellence Reach proper dimension to develop and acquire expensive and idiosyncratic capabilities, and share them with all PA

Design and coordinate implementation of Data Policies Help interoperability and usage of state-of-the-art standards and processes in data management and analysis. Stimulates research and collaboration.

Our Strategy

Introduction of DAF in Piano Triennale 2017-2019 digitalization of the PA, and signed by the Prime Minister

DAF prototype development TD started the development of the platform from scratch around March '17, and released an Alpha version the first week of October '17

Experimental phase

We started working with a selected number of PA to showcase DAF, test it and listen to PA's needs so to fine-tune the platform before final release

Institutionalization of DAF CAD)

DAF is one of the building blocks of the official document setting the strategy for

Introduce by law the role of a central data office for the entire PA (art. 50-ter

DAF Functionalities

● Unique data catalogue for all PA → standardards & easy to search • Standardization and Normalization procedures. Ontologies and controlled vocabularies

- practices and **monitoring**
- Analytics capabilities on the shelf: • BI & Dashboard tool integrated • Jupyter **notebook** integrated with Spark • Data stories & Collaboration API & Data Applications • Open Data as a Service

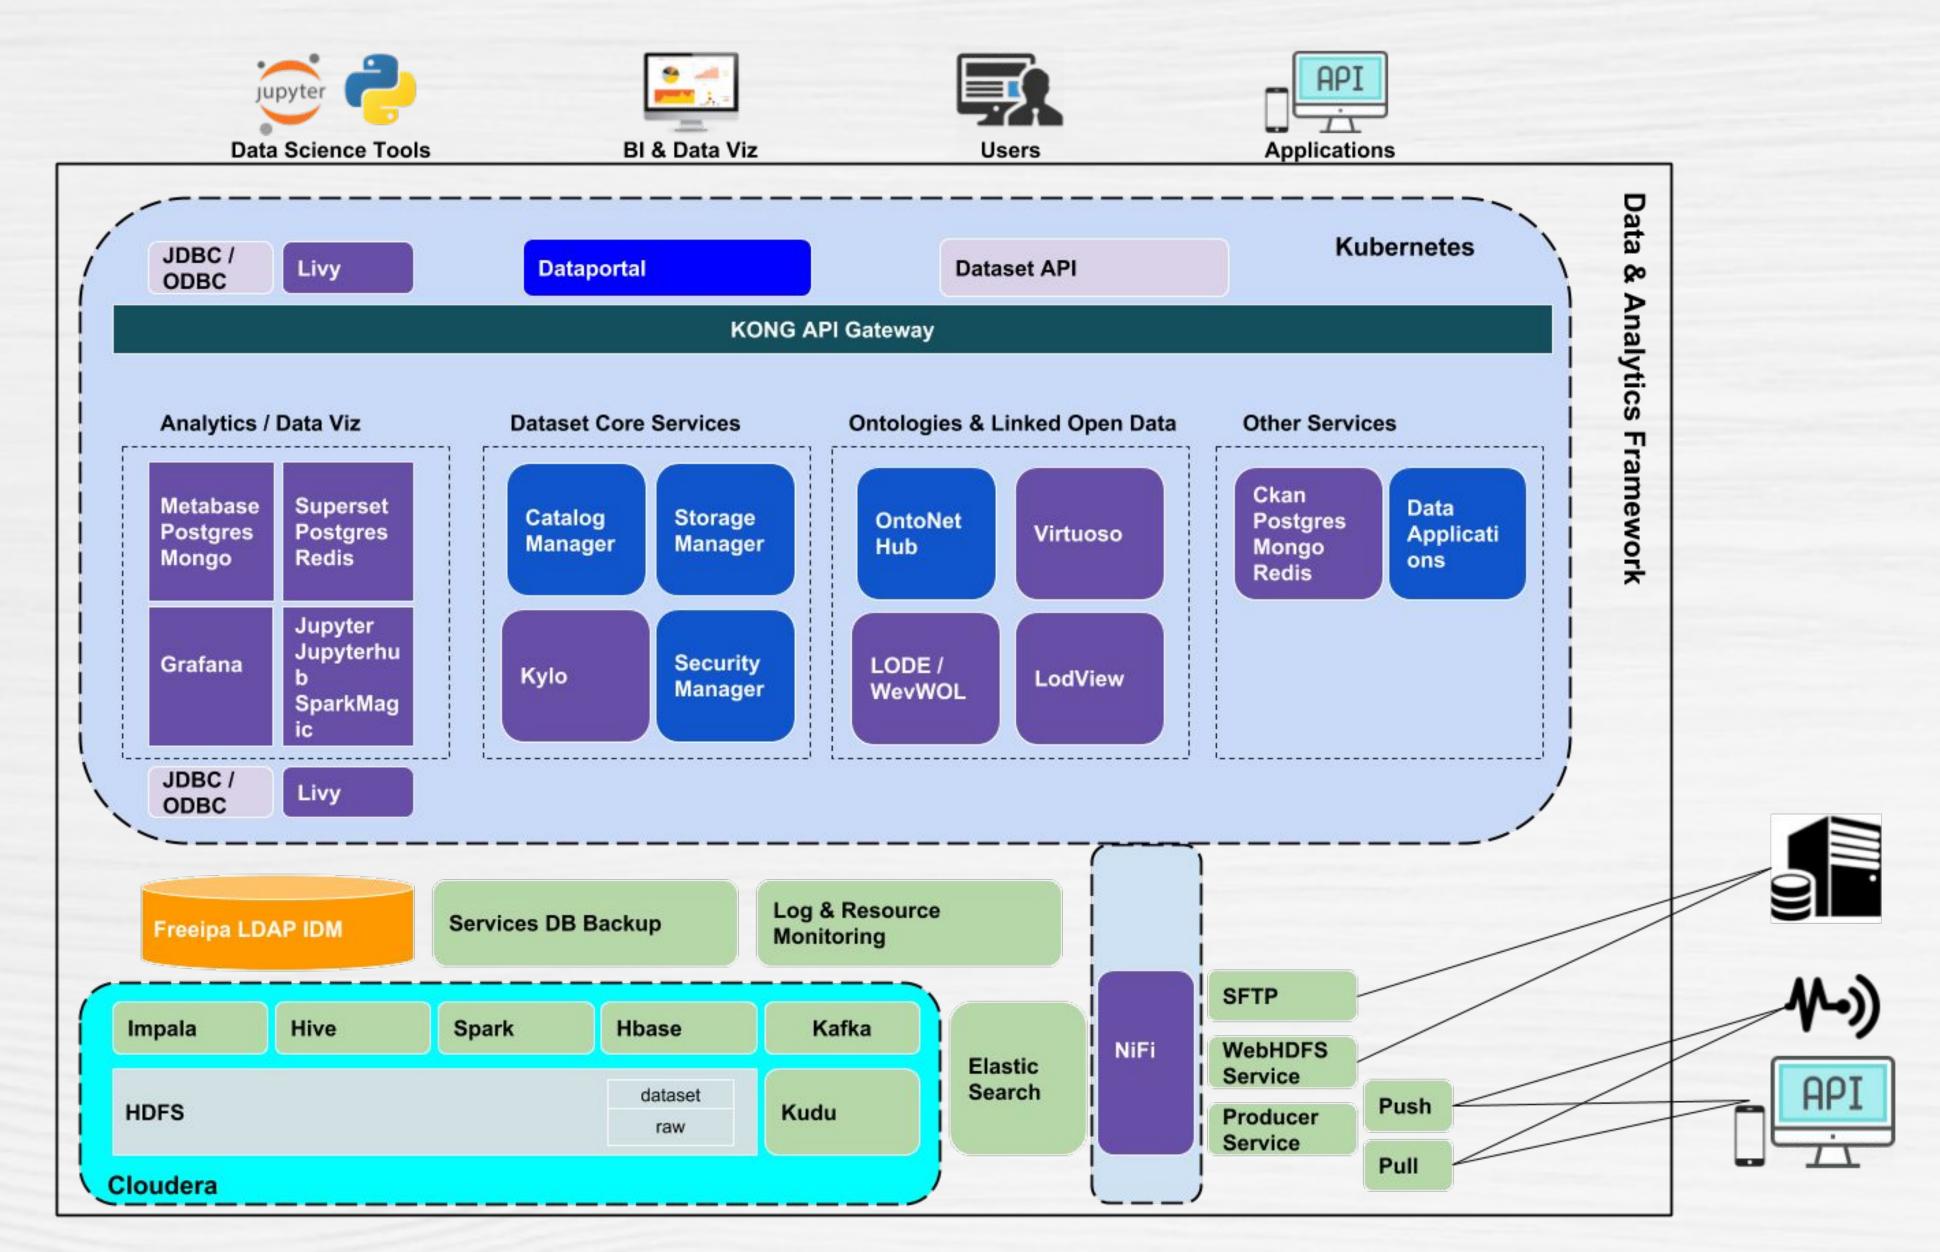

• Unified data sharing platform, with rigid data governance, security

• Automated Data management processes, for both batch and real-time

DAF High Level Architecture
